Course Authoring, Review and Publication

Roles and ownership

Role	Responsibilities
Content Creator	Create and edit own/assigned drafts; upload content; configure tests; submit for review; discuss pricing; request publication.
Content Manager	Manage categories and assignments; author courses; review assigned submissions; request corrections; approve content.
Administrator	Manage staff permissions; review self-authored-manager courses or assign an independent reviewer; approve final pricing; publish or archive courses.
Student	Select interests and browse relevant published course information. Learning access requires enrollment in a later phase.

Content Creator Course Creation

1. Creator logs in and selects an assigned category/subcategory.

2. Author adds title, subtitle, description, objectives, prerequisites, level, language, and thumbnail.

3. Author creates multiple modules and chapters with videos, notes, resources, and chapter quizzes.

4. Author creates topic-wise questions, module mock tests, final mock test, and completion rules.

5. Author submits the course. Content Manager approves or requests changes; corrections are resubmitted.

6. Creator, Manager, and Administrator discuss pricing in the course thread. Administrator records official pricing separately.

7. When content, pricing, and listing details are ready, the creator submits a publication request.

8. Administrator performs the final check and publishes the approved revision.

9. Published course details appear in the catalogue and relevant student recommendations.

Acceptance criteria

- A creator can only select permitted categories and edit own/assigned courses; changing an object ID cannot bypass access checks.
- Multiple modules and chapters can be saved, reordered, reopened and previewed without losing content.
- Autosave reports actual server status and stale edits do not silently overwrite newer edits.
- Required media must be validated and ready before submission. Failed uploads can be retried.
- Question imports with errors save no partial records; configured tests cannot exceed eligible question pools.
- Feedback and review decisions are traceable. Authors cannot approve their own content.
- Chat discussions do not change official pricing; administrator confirmation is recorded explicitly.
- Only the approved revision is published. Changes to a working revision do not modify the live course.
- Course cards show accurate creator information and no invented ratings.
- Student interests produce relevant published recommendations without granting paid-content access.

Student Enrollment

- Student enrollment, checkout/payment gateway integration, refunds and subscription billing.
- Protected student video playback, progress tracking, actual quiz/mock attempts, scoring and result pages.
- Student retry question-set selection, weak-topic reports, and certificate PDF generation/verification.
- Public student ratings/reviews and moderation; live chat/WebSockets; discussion attachments.
- AI recommendations, live classes, mobile apps, DRM, proctoring and multilingual translation.
